Get involved in 2008

Google Summer of Code

The *Google Summer of Code* program is designed to encourage student participation in open source development. The Open Source Geospatial Foundation is looking for students to join us in making 2008 the best Summer of Code yet! We'll be offering successful student contributors a 4500 USD stipend, enabling them to focus on their coding projects for three months.

The project ideas are ranging from the depths of computer science graph theory to the heights of visualization.

Proposed projects: GDAL, GeoServer, GeoTools, GRASS, Mapbender, MapGuide Open Source, MapServer, OpenLayers, PostGIS, ...

Your own ideas are more than welcomed - they are encouraged.

Student applications run from 21 – 31 March 2008
