Coding Interactive Maps Boot Camp

200 Word Abstract:
This session is a half day can be full day too hands on code camp which can be easily completed by those with only basic developer skills. Attendees will learn how to create custom interactive maps using ActionScript API's and SDK's and Adobe's free and open source Flex SDK. Skills taught will be base maps, adding layers, custom icons, map control and mobile migration. All attendees will complete this on thier own laptops, we will hand out preparation instructions and software so they leave with the code to continue with. Non coders have taken similar classes we have taught in the past and completed them, in fact at Geoweb, a similar course got ranked 5/5 stars.
